

ElectronicDataViewer™ is revolutionizing the document review process by bridging the divide between the traditional paper discovery process and the emerging e-discovery industry, and by giving Kroll Ontrack customers the power to control their discovery costs. This tool improves the efficiency of the review process by integrating paper and electronic documents in a single database and by facilitating the review of documents either in their native formats or as tiff images. With this easy-to-use online repository and review tool, users are able to perform document review functions – searching, categorizing, redacting, and annotating – in a secure, online database repository uniquely dedicated to their case.

Kroll Ontrack recently added new features to ElectronicDataViewer to improve the efficiency of the review process, including:

Native File Review | Review electronic documents in their native file formats. When you need tiff images of documents for further handling or production, you can promote them directly within the tool and then annotate or redact them immediately. The project calculator – a pricing tool within the repository – helps you control how much you spend by calculating the actual cost of the number of documents you choose to convert to tiff images.

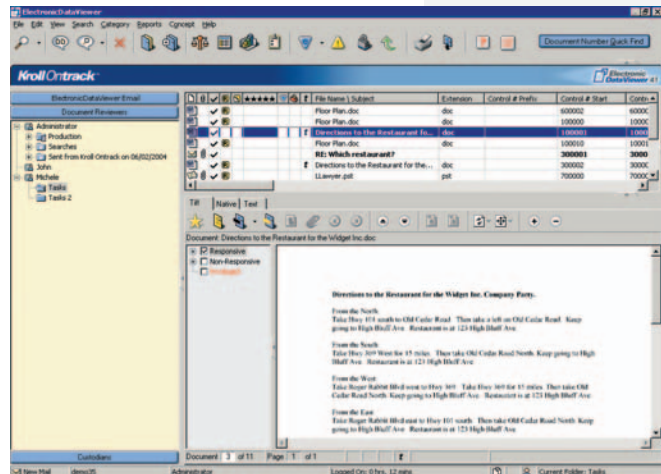

Color Document Viewing | Gain the benefits of viewing spreadsheets, graphics files, and picture files in native format, as they were created, and in full color.

Integrated Review of Paper & Electronic Documents | Review electronic and paper documents together. ElectronicDataViewer integrates the traditional scanning and coding of paper documents with their electronic document counterparts in one online repository. You can edit coding fields without having to share them with the fields for extracted electronic document metadata.

Download Documents to Your Desktop | Download a copy of a document directly to your desktop. You can then open the document in its native application and see it exactly as it was created – complete with hidden formulas, tracked changes, and comments.

Local Batch Print | Print batches of documents locally in your office. There is no delay when you need a single printout or a full set of hard copy documents for a meeting, deposition, or trial.

Customizable Reviewer & Administrator Permissions | Assign feature and functionality permissions across groups of reviewers to better control the review process. Review administrators can manage which reviewers can redact, print, search, and more.

ElectronicDataViewer also has time-tested features that continue to make it best-of-breed document review software, including:

Simple Start-Up | Operate ElectronicDataViewer using a Web browser. The software does not require the separate installation of additional hardware or software to take advantage of all of its functionality.

Easy-To-Use Interface | View many different types of documents, both paper and electronic, through a single user interface that requires very little training and has the "look and feel" of many familiar programs.

Security & Speed | Know your documents are secure. ElectronicDataViewer has the very highest levels of security available in the industry. Because ElectronicDataViewer uses Microsoft® Terminal Services, your documents do not travel across the Internet, enhancing both speed and security. A document typically loads onto the computer screen in less than one second.

Powerful Term & Concept Searching | Search by keyword, user, date, metadata and coding fields, and more. ElectronicDataViewer features the most advanced searching capabilities in the industry, with both cutting-edge concept searching and traditional term searching. ElectronicDataViewer has 10 times the search power of similar tools.

Robust Duplicate Handling | Choose from several options for handling duplicate electronic documents. Whether you are categorizing all duplicates exactly the same, applying separate categorizations to independent duplicates, or managing exceptions, ElectronicDataViewer is the only tool that offers you complete control and flexibility of managing duplicate documents.

Advanced Redaction Capabilities & Privilege Log Creation | Redact documents and record corresponding comments simultaneously to help create a privilege log.

Automated, Real-Time Reporting | Run and view project status reports in real time. You can choose from an array of pre-defined reports and automatically email the reports to yourself or others.

Training & Technical Support | Receive free initial on-site and remote training, as well as a dedicated and experienced system engineer to aid you throughout the review process.

The best way to fully appreciate the power of ElectronicDataViewer is to see it in action. Kroll Ontrack provides both public and private demonstrations of the tool. Visit our Web site to check our upcoming events, or contact us today to speak to a representative in your area.
